

**CHAUDHARY BANSI LAL UNIVERSITY,
PREM NAGAR, BHIWANI**

**SCHEME AND SYLLABI OF EXAMINATIONS
FOR
FIVE-YEAR INTEGRATED (B.SC-M.SC) IN
MATHEMATICS
WITH EFFECT FROM THE SESSION 2025-26
(As per NEP)**

**DEPARTMENT OF MATHEMATICS
Chaudhary Bansi Lal University,
Prem Nagar-127031, Bhiwani
HARYANA, INDIA**

Scheme and Syllabus of Five Year Integrated(B.Sc-M.Sc) Programme in Mathematics:2025-26

B.Sc. (Hons.) Programme in Mathematics:2025-26																
Core Courses(CC) & Minor Courses (CC-M)	Nomenclature of Course	Course Code	Credits Distribution			Total Credits	Workload			Total Workload	Marks				Total Marks	
			L	T	P		L	T	P		Theory	Practical				
												Internal	External			
Semester II																
CC-U3	Calculus	25IMSMA201	3	0	1	4	3	0	2	3+2	20	50	10	20	100	
CC-U4	Number Theory and Trigonometry	25IMSMA202	3	1	0	4	3	1N	0	3+1	30	70	-	-	100	
CC-M2	Statistical Methods	25IMSST201	3	0	1	4	3	0	2	3+2	20	50	10	20	100	
MDC2 @ 3 credits	From Available pool of Multidisciplinary Courses of the University/SWAYAM/ MOOCS from a subject of different discipline as per NEP.															
AEC2	From Available pool of Ability Enhancement Courses as per NEP															
SEC2	From Available pool of Skill Enhancement Courses as per NEP															
VAC2	From Available pool of Value Added Courses as per NEP															
Semester III																
CC-U5	Ordinary Differential Equations-I	25IMSMA301	3	0	1	4	3	0	2N	3+2N	20	50	10	20	100	
CC-U6	Advanced Calculus	25IMSMA302	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100	
CC-U7	Solid Geometry	25IMSMA303	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100	
CC-M3	Probability Theory	25IMSST301	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100	
MDC3 @ 3 credits	From Available pool of Multidisciplinary Courses of the University/SWAYAM/ MOOCS from a subject of different discipline as per NEP.															
AEC3	From Available pool of Ability Enhancement Courses as per NEP															
SEC3	From Available pool of Skill Enhancement Courses as per NEP															
Semester IV																
CC-U8	Partial Differential Equations-I	25IMSMA401	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100	
CC-U9	Real Analysis	25IMSMA402	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100	
CC-U10	Statics	25IMSMA403	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100	

Date of PG BOS & R: July 22, 2025

Date of PGBO&R: July 22, 2025

CBLU-Syllabus: Five Year Integrated(B.Sc-M.Sc) Programme in Mathematics:2025-26

CC-U11	Groups and Rings	25IMSMA404	3	0	1	4	3	0	2N	3+2N	20	50	10	20	100
CC-M4(VOC)	Probability Distributions	25IMSST401	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
AEC4	From Available pool of Ability Enhancement Courses as per NEP														
VAC4	From Available pool of Value Added Courses as per NEP														
Semester V															
CC-U12	Special Functions and Integral Transformations	25IMSMA501	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-U13	Sequences and Series	25IMSMA502	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-U14	Linear Algebra	25IMSMA503	3	0	1	4	3	0	2N	3+2N	20	50	10	20	100
CC-U15	Dynamics	25IMSMA504	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-M5 (VOC)	Testing of Hypothesis	25IMSST501	3	0	1	4	3	0	2N	3+2N	20	50	10	20	100
Semester VI															
CC-U16	Hydrostatics	25IMSMA601	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-U17	Numerical Analysis	25IMSMA602	3	0	1	4	3	0	2N	3+2N	20	50	10	20	100
CC-U18	Metric Spaces	25IMSMA603	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-U19	Complex Analysis	25IMSMA604	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-M6 (VOC)	Design of Experiments	25IMSST601	3	0	1	4	3	0	2N	3+2N	20	50	10	20	100
Semester VII															
CC-P1	Abstract Algebra	25IMSMA701	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-P2	Mathematical Analysis	25IMSMA702	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-P3	Discrete Mathematics	25IMSMA703	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-P4	Ordinary Differential Equations-II	25IMSMA704	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-P5	Mechanics	25IMSMA705	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-M7 (VOC)	Statistical Inference	25IMSST701	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
Semester VIII															
CC-P6	Topology	25IMSMA801	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-P7	Analytical Number Theory	25IMSMA802	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100
CC-P8	Integral Equations and Calculus of Variations	25IMSMA803	3	1	0	4	3	1N	0	3+1N	30	70	-	-	100

Date of PGBOS & R: July 22, 2025

Date of PG BOSER: July 22, 2025

CBLU-Syllabus: Five Year Integrated(B.Sc-M.Sc) Programme in Mathematics:2025-26

CC-P9	Partial Differential Equations-II	25IMSMA804	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100
CC-P10	Differential Geometry	25IMSMA805	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100
CC-M8 (VOC)	Optimization Techniques	25IMSST801	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100
CC-P11	Measure and Integration Theory	25IMSMA901	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100
CC-P12	Fluid Dynamics	25IMSMA902	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100
CC-P13	Mechanics of Solids-I	25IMSMA903	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100
DEC-P14	Mathematical Modeling	25IMSMA904	3	1	0	4	3	IN	0	3+IN	30	70	-	-	100

N : Number of Groups in the Class

L: Lecture; T: Tutorial; P: Practical

* -- The teaching hours/workload of 1 hour per week will be counted for the teacher supervising 2-3 students and a teacher can supervise maximum 16 students for supervising dissertation/project/ Thesis.

Date of FEGBOS&R: July 22, 2025

Semester - III
Session: 2025-26

Name of the Course	Ordinary Differential Equations-I	Course Code	25IMSMA301
Maximum Marks	Theory: 20(Internal)+50(External)=70 Practical: 10(Internal)+20(External)=30	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Be familiar with formation of differential equations and to solve exact differential equations by finding integrating factors. CLO2 Find solution of Lagrange's equations, Clairaut's equations and other standard equations of first order but not of first degree. CLO3 Learn the concept of auxiliary equation, particular integral for linear differential equations with constant co-efficients and their solution. CLO4 Understand linear differential equations of second order and their solution by different methods. CLO5 Get familiar with solution of ordinary simultaneous differential equations and total differential equations.			
Section – I Geometrical meaning of a differential equation. Exact differential equations. Integrating factors. First order higher degree equations solvable for x,y,p. Lagrange's equations, Clairaut's equations. Equation reducible to Clairaut's form. Singular solutions.			
Section – II Orthogonal trajectories: Cartesian coordinates and polar coordinates. Self-orthogonal family of curves. Linear ordinary differential equations with constant coefficients. Homogeneous linear ordinary differential equations. Equations reducible to homogeneous.			
Section - III Linear differential equations of second order: Reduction to normal form. Transformation of the equation by changing the dependent variable/the independent variable. Solution by operators of non-homogeneous linear differential equations. Reduction of order of a differential equation. Method of variations of parameters. Method of undetermined coefficients.			
Section – IV Ordinary simultaneous differential equations. Solution of simultaneous differential equations involving operators $x (d/dx)$ or $t (d/dt)$ etc. Simultaneous equation of the form $dx/P = dy/Q = dz/R$. Total differential equations. Condition for $Pdx + Qdy + Rdz = 0$ to be exact. General method of solving $Pdx + Qdy + Rdz = 0$ by taking one variable constant. Method of auxiliary equations			
Practical/ Computational Work (Based on course Ordinary Differential Equations-I) Practical: 10(Internal)+20(External)=30 There will be five questions in all, and the students must attempt any three questions. The question paper will set on the spot jointly by the internal and external examiners. Distribution of Marks will be as follows: i) Written Practical/ Lab work : 10 Marks ii) Viva-voce and practical record: 10 Marks			
List of Practicals Use of computer algebra systems (CAS) MATLAB for developing the following programs: 1. Plotting of solutions of first order differential equation. 2. Plotting of solutions of family of second order differential equation. 3. Plotting of solutions of family of third order differential equation. 4. Solution of differential equation by variation of parameter method.			

Date of PG BOS & R: July 22, 2025

5. Solution of system of ordinary differential equations.
6. Solving exact and non-exact ODEs.
7. Solution of linear equations.
8. Problems on equations reducible to linear equations.
9. Plotting of orthogonal trajectories.
10. Population growth and finding the current at a given time.
11. Applications of ODEs.

Date of PG BOS & R: July 22, 2025

Semester - III
Session: 2025-26

Name of the Course	Advanced Calculus	Course Code	25IMSMA302
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Understand the concepts of continuity, uniform continuity and their related theorems. CLO2 Describe the concepts of limit, continuity and differentiability of real valued function of two variables. CLO3 Explain maxima, minima and saddle points of two variables and Lagrange's method of multipliers. CLO4 Determine the tangent, principle normal, locus of curvature, Bertrand curves, tangent plains and apply them to different problems.			
Section – I Continuity, Sequential continuity, Properties of continuous functions, Uniform continuity, Chain rule of differentiability. Mean value theorems: Rolle's Theorem and Lagrange's mean value theorem and their geometrical interpretations. Taylor's Theorem with various forms of remainders, Darboux intermediate value theorem for derivatives, Reduction formulae. Rectification, Intrinsic equations of curve.			
Section – II Limit and continuity of real valued functions of two variables. Partial differentiation. Total Differentials: Composite functions & Implicit functions. Change of variables. Homogenous functions & Euler's theorem on homogeneous functions. Taylor's theorem for functions of two variables.			
Section – III Differentiability of real valued functions of two variables. Schwarz and Young's theorem. Implicit function theorem. Maxima, Minima and saddle points of two variables. Lagrange's method of multipliers.			
Section – IV Curves: Tangents, Principal normals, Binormals, Serret-Frenet formulae. Locus of the centre of curvature, Spherical curvature, Locus of centre of Spherical curvature, Involutives, Evolutes, Bertrand Curves. Surfaces: Tangent planes, One parameter family of surfaces, Envelopes.

Date of PG BOS & R: July 22, 2025

Semester - III

Name of the Course	Solid Geometry	Course Code	25IMSMA303
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Derive system of conics, confocal conics and polar equation of a conic. CLO2 Determine the tangent and normal at any point, chord of contact and poles of line for a conic. CLO3 Understand the concept of sphere, cone and cylinder. CLO4 Obtain the equations of tangent plane, director sphere, normal to the conicoids and enveloping. CLO5 Describe circular section, plane sections of conicoids, generating lines, confocal conicoid and reductions of second degree equations.			
Section – I General equation of second degree. Tracing of conics. Tangent at any point to the conic, Chord of contact, pole of line to the conic, Director circle of conic. System of conics. Confocal conics. Polar equation of a conic, Tangent and normal to the conic.			
Section – II Sphere: Plane section of a sphere. Sphere through a given circle. Intersection of two spheres, Radical plane of two spheres. Co-axial system of spheres. Cones. Right circular cone, Enveloping cone and reciprocal cone. Cylinder: Right circular cylinder and enveloping cylinder.			
Section - III Central Conicoids: Equation of tangent plane. Director sphere. Normal to the conicoids. Polar plane of a point. Enveloping cone of a conicoid. Enveloping cylinder of a conicoid.			
Section – IV Paraboloids: Circular section, Plane sections of conicoids. Generating lines. Confocal conicoid. Reduction of second degree equations.

Date of PGBOS & R: July 22, 2025

Semester - III

Name of the Course	Probability Theory	Course Code	25IMSST301
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Students acquired a Base to Understand Fundamentals of Probability CLO 2: Students acquired the Knowledge about Random Variables, Probability Mass Function and Density Function CLO 3: Students acquired the Knowledge to Understand Applications of Probability Theory in Real Life Problems CLO 4: Students acquired the Knowledge to Formulate Generating Functions and Related Inequalities CLO 5: Students acquired the Ability to Understand the Applications of Law of Large Numbers and Central Limit Theorems			
Section – I Random Experiment, Sample Space, Events – Simple, Composite, Mutually Exclusive and Exhaustive Events, Various Definitions of Probability, Properties of Probability Function, Addition Theorem, Boole's and Bonferroni's Inequalities, Conditional Probability, Independence of Events, Multiplication Theorem, Bayes' Theorem.			
Section – II Random Variables and Distribution Functions, Probability Mass Function, Probability Density Function, Two Dimensional Random Variables- Joint, Marginal and Conditional Distributions, Independence of Random Variables. Moments of Random Variables: Expectation, Variance, Covariance, Conditional and Marginal Expectation.			
Section – III Probability and Moment Generating Function and Their Properties, Cumulants, Characteristic Function and Its properties, Continuity Theorem, Inversion Theorem, Uniqueness Theorem of Characteristic Function, Moment Inequalities of Hölder, Minkowski, Jensen's, Cauchy- Schwartz and Lyapunov's.			
Section – IV Modes of Convergence: Convergence in Probability, Almost Surely, in the r th Mean and in Distribution, Their Relationship. Probability Inequalities of Chebychev and Markov, Weak Law of large numbers: Chebychev's, Bernoulli's and Khintchine's Weak Law of Large Numbers, Necessary and Sufficient Conditions for the WLLN, Borel Cantelli Lemma, Kolmogorov Inequality, Strong Law of Large Numbers: Kolmogorov's Theorem. Central Limit Theorem: Lindeberg - Levy and Demoivre- Laplace Forms of CLT.

Date of PGBOS&R: July 22, 2025

Semester - IV

Name of the Course	Partial Differential Equations-I	Course Code	25MSMA401
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Solve Lagrange's linear equations using Charpit's general method and Jacobi's method. CLO2 Classify partial differential equations and transform them into cononical forms. CLO3 Solve partial differential equations of second order by Monge's method. CLO4 Understand the characteristic equations and characteristic curves of second order partial differential equations. CLO5 Solve Laplace equation, wave equations and diffusion equation.			
Section – I Partial differential equations: Formation, Order and degree, Linear and Non-Linear Partial differential equations of the first order, Complete solution, Singular solution, General solution, Solution of Lagrange's linear equations. Charpit's method. Compatible systems of first order equations, Jacobi's method.			
Section – II Linear partial differential equations of second and higher orders, Linear and non-linear homogeneous and non-homogeneous equations with constant coefficients, Partial differential equation with variable co-efficients reducible to equations with constant coefficients, Complimentary functions and particular Integrals, Equations reducible to linear equations with constant coefficients.			
Section - III Classification of linear partial differential equations of second order, Hyperbolic, Parabolic and Elliptic types, Reduction of second order linear partial differential equations to Canonical (Normal) forms and their solutions, Solution of linear hyperbolic equations, Monge's method for partial differential equations of second order.			
Section – IV Cauchy's problem for second order partial differential equations, Characteristic equations and characteristic curves of second order partial differential equations, Method of separation of variables: Laplace's equation, Wave equation (one and two dimensions), Diffusion (Heat) equation (one and two dimension) in Cartesian Co-ordinate system.

Date of PG BOS & R: July 22, 2025

Semester - IV			
Name of the Course	Real Analysis	Course Code	25IMSMA402
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Understand various properties related with supremum and infimum of sets. CLO2 Apply the concepts of integration to real life problems. CLO3 Construct and interpret various proper and improper integrals. CLO4 Understand how real numbers provide a complete ordered field and to explain the fundamental concepts of real analysis.			
Section – I Finite and infinite sets, Countable and uncountable sets, Bounded sets, Suprema and infima, Completeness property of $\mathbb{R}$, Archimedean property of $\mathbb{R}$.			
Section – II Riemann integral, Integrability of continuous and monotonic functions, Fundamental theorem of integral calculus. Mean value theorems of integral calculus.			
Section – III Improper integrals and their convergence, Comparison tests, Abel's and Dirichlet's tests, Frullani's integral, Integral as a function of a parameter. Continuity, Differentiability and integrability of an integral of a function of a parameter..			
Section – IV Jacobians, Beta and Gamma functions, Double and Triple integrals, Dirichlet's integrals, Change of order of integration in double integrals, Applications of double integration,

Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Understand the composition and resolution of forces. CLO2 Apply the the conditions of equilibrium to solve problems on friction, centre of gravity and virtual work. CLO3 Understand and solve the problems based on stable and unstable equilibrium Construct and interpret various proper and improper integrals. CLO4 Understand the theory of forces in three dimensions and wrenches.			
Section – I Composition and resolution of forces. Parallel forces. Moments and Couples.			
Section – II Analytical conditions of equilibrium of coplanar forces. Friction. Centre of Gravity.			
Section - III Virtual work. Forces in three dimensions. Poinso's central axis.			
Section – IV Wrenches. Null lines and planes. Stable and unstable equilibrium.

Date of PG BOS & R: July 22, 2025

Semester IV

Name of the Course	Groups and Rings	Course Code	25IMSMA404
Maximum Marks	Theory: 20(Internal)+50(External)=70 Practical: 10(Internal)+20(External)=30	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1 Demonstrate understanding of the idea of a group, subgroup, cyclic groups, normal groups and quotient groups. CLO 2 Understand and apply the concepts of homomorphism, isomorphism, automorphisms and inner automorphisms of a group. CLO 3 Describe rings, subrings, Euclidean rings, polynomial rings and the Eisenstein's criterion of irreducibility.			
Section-I Definition of a group with example and simple properties of groups, Subgroups and subgroup criteria, Generation of groups, Cyclic groups, Cosets, Left and right cosets, Index of a subgroup, Coset decomposition, Lagrange's theorem and its consequences, Normal subgroups, Quotient groups.			
Section-II Homomorphisms, Isomorphisms, Automorphisms and Inner automorphisms of a group, Automorphisms of cyclic groups, Permutations groups, Even and odd permutations, Alternating groups, Cayley's theorem.			
Section -III Introduction to ring, Subring, Integral domain and field, Characteristics of a ring, Ring homomorphism, Ideals (principle, prime and maximal) and Quotient ring, Field of quotients of an integral domain.			
Section-IV Euclidean ring, Polynomial ring, Polynomials over the rational field, The Eisenstein's criterion, Polynomial rings over commutative rings, Unique factorization domain, R unique factorization domain implies so is $R[X_1, X_2, \dots, X_n]$.			
Practical/ Computational Work (Based on course Groups and Rings) Practical: 10(Internal)+20(External)=30 There will be five questions in all, and the students must attempt any three questions. The question paper will set on the spot jointly by the internal and external examiners. Distribution of Marks will be as follows: i) Written Practical/ Lab work : 10 Marks ii) Viva-voce and practical record: 10 Marks			
List of Practicals Following is the list of programmes to be performed in the Lab using MATLAB: 1. Group verification (Program to check if a given set with a binary operation forms a group). 2. Verify group properties (Implement functions to check if a given set with an operation satisfy closure, associativity, identity and inverse properties). 3. Cayley table generation (Function to generate the Cayley table for a given group. This table visually represents the results of the group's binary operation on all pairs of elements).			

Date of PG BOS & R: July 22, 2025

4. Subgroup identification (Algorithm to identify all subgroups of a given group).
5. Cyclic group check (Program to determine if a given group is cyclic).
6. Cyclic group generation (Functions to generate cyclic groups and find their generators).
7. Group isomorphism (Program to determine whether two groups are isomorphic).
8. Ring verification (Program to verify if a given set with two binary operations i.e. addition and multiplication forms a ring).
9. Subgroup and subring test (Functions to verify if a subset is a subgroup or subring of a larger group or ring, respectively).
10. Ring homomorphism (Program to determine if a given mapping between two rings is a ring homomorphism).
11. Ideals in rings (Program to identify ideals in a given ring).
12. Practical based on polynomial rings.
13. Quotient groups and rings (Program to form quotient group and ring with given group and ring).

Date of FPG BOS & R: July 22, 2025

CBLU-Syllabus: Five Year Integrated(B.Sc-M.Sc) Programme in Mathematics:2025-26

Semester - IV

Name of the Course	Probability Distributions	Course Code	25IMSST401
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Students acquired Knowledge to Understand Probability Distributions CLO 2: Students acquired the Knowledge of Practical Applications of Various Probability Distributions CLO 3: Students acquired the Ability to Fit the Probability Distributions CLO 4: Students acquired the Skill to Determine the Relationships between the Distributions CLO 5: Students acquired the Knowledge of Computational Procedure of Various Statistical Properties of Probability Distributions			
Section 1 Discrete Distributions-I: Bernoulli, Binomial and Poisson Distributions: Functions and Properties such as Mean, Median, Mode, Variance, Standard Deviation, Moments up to Fourth Order, Moment Generating Function (M.G.F.), Cumulants up to Fourth Order, Cumulant Generating Function (C.G.F.), Probability Generating Function (P.G.F.), Characteristic Function (C.F.), Reproductive Property (Wherever Exists) and Their Real Life Applications, Poisson Approximation to Binomial Distribution.			
Section 2 Discrete Distributions-II: Uniform, Negative Binomial, Geometric, Hyper-Geometric Distributions: Functions and Properties such as Mean, Median, Mode, Variance, Standard Deviation, Moments up to Fourth Order, M.G.F., Cumulants up to Fourth Order, C.G.F., P.G.F., C.F., Reproductive Property (Wherever Exists) and Their Real Life Applications, Lack of Memory Property for Geometric Distribution, Poisson Approximation to Negative Binomial Distribution, Binomial Approximation to Hyper-Geometric Distribution.			
Section 3 Continuous Distributions-I: Rectangular, Exponential, Normal Distributions and Gamma Distribution: Functions and Properties such as Mean, Median, Mode, Variance, Standard Deviation, Moments up to Fourth Order, M.G.F., Cumulants up to Fourth Order, C.G.F., P.G.F., C.F., Reproductive Property (Wherever Exists) and Their Real Life Applications, Normal Distribution as a Limiting Case of Binomial and Poisson Distributions.			
Section 4 Continuous Distributions-II: Beta First & Second Kind and Cauchy Distributions: Functions and Properties (Wherever Exists) such as Mean, Median, Mode, Variance, Standard Deviation, Moments up to Fourth Order, M.G.F., Cumulants up to Fourth Order, C.G.F., P.G.F., C.F., Reproductive Property (Wherever Exists) and Their Real Life Applications.

Date of PGBOS&R: July 22, 2025

Semester - V

Name of the Course	Special Functions and Integral Transformations	Course Code	25IMSMA501
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CO1 Be familiar with Bessel's functions, Hermite's polynomial, Legendre's polynomial and their properties. CO2 Solve Bessel's, Legendre's and Hermite's equations. CO3 Find the Laplace transform, inverse laplace transform of various functions. CO4 Apply Laplace transform to solve ordinary differential equations. CO5 Determine the Fourier transform of various functions and solve the partial differential equations using them.			
Section – I Series solution of differential equations – Power series method, Definitions of Beta and Gamma functions. Bessel equation and its solution: Bessel functions and their properties-Convergence, recurrence, Relations and generating functions, Orthogonality of Bessel functions.			
Section – II Legendre and Hermite differentials equations and their solutions: Legendre and Hermite functions and their properties-Recurrence Relations and generating functions. Orthogonality of Legendre and Hermite polynomials. Rodrigues' Formula for Legendre & Hermite Polynomials, Laplace Integral Representation of Legendre polynomial.			
Section – III Laplace Transforms – Existence theorem for Laplace transforms, Linearity of the Laplace transforms, Shifting theorems, Laplace transforms of derivatives and integrals, Differentiation and integration of Laplace transforms, Convolution theorem, Inverse Laplace transforms, convolution theorem, Inverse Laplace transforms of derivatives and integrals, solution of ordinary differential equations using Laplace transform.			
Section – IV Fourier transforms: Linearity property, Shifting, Modulation, Convolution Theorem, Fourier Transform of Derivatives, Relations between Fourier transform and Laplace transform, Parseval's identity for Fourier transforms, solution of differential Equations using Fourier Transforms.			
Books Recommended: 1. Erwin Kreyszing, Advanced Engineering Mathematics, John Wiley & Sons, Inc., New York, 1999 2. A.R. Forsyth, A Treatise on Differential Equations, Macmillan and Co. Ltd. 3. I.N. Sneddon, Special Functions on mathematics, Physics & Chemistry. 4. W.W. Bell, Special Functions for Scientists and Engineers. 5. I.N. Sneddon, The use of integral transform, McGraw Hill, 1972 6. Murray R. Spiegel, Laplace transform, Schaum's Series			

Date of PGBOS&R: July 22, 2025

Semester - V

Name of the Course	Sequences and Series	Course Code	25IMSMA502
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Explain the concept of sequences and their types. CLO2 Identify the convergence of sequences and series of positive terms. CLO3 Apply various important convergence tests to the given series. CLO4 Understand the difference between conditional and absolute convergence of Alternating series.			
Section – I (Foundations of Real Analysis) Boundedness of the set of real numbers; least upper bound, greatest lower bound of a set, neighborhoods, interior points, isolated points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weiestrass theorem, Open covers, Compact sets and Heine-Borel Theorem.			
Section-II (Sequences and their Convergence) Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence, Cauchy general principle of convergence, Subsequences, Subsequential limits. Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, Cauchy's general principle of Convergence of series, Convergence and divergence of geometric series, Hyper Harmonic series or p-series.			
Section-III (Infinite Series and Convergence Tests) Infinite series: D-Alembert's ratio test, Raabe's test, Logarithmic test, de Morgan and Bertrand's test, Cauchy's nth root test, Gauss Test, Cauchy's integral test, Cauchy's condensation test.			
Section-IV (Advanced Series and Infinite Products) Alternating series, Leibnitz's test, absolute and conditional convergence, Arbitrary series: Abel's lemma, Abel's test, Dirichlet's test, Insertion and removal of parenthesis, re-arrangement of terms in a series, Dirichlet's theorem, Riemann's Re-arrangement theorem, Pringsheim's theorem (statement only), Multiplication of series, Cauchy product of series, (definitions and examples only) Convergence and absolute convergence of infinite products.			
Books Recommended: 1. R.R. Goldberg, Real Analysis, Oxford & I.B.H. Publishing Co., New Delhi, 1970 2. S.C. Malik, Mathematical Analysis, Wiley Eastern Ltd., Allahabad. 3. Murray, R. Spiegel, Theory and Problems of Advanced Calculus, Schaum Publishing Co., New York 4. T.M. Apostol, Mathematical Analysis, Narosa Publishing House, New Delhi, 1985 5. Earl D. Rainville, Infinite Series, The Macmillan Co., New York.			

Date of PGBOS&R: July 22, 2025

Semester V

Name of the Course	Linear Algebra	Course Code	25IMSMA503
Maximum Marks	Theory: 20(Internal)+50(External)=70 Practical: 10(Internal)+20(External)=30	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1 Get familiar with vector spaces, subspaces and existence theorem for basis of a finitely generated vector space. CLO 2 Describe the concepts of homomorphism, isomorphism and dual spaces. CLO 3 Learn singular and non-singular linear transformations, eigen values and eigen vectors of linear transformations. CLO 4 Understand the Gram Schmidt orthogonalization process, inner product spaces, orthogonal vectors, and orthogonal sets.			
Section-I Vector spaces, Subspaces, Sum and direct sum of subspaces, Linear span, Linearly Independent and dependent subsets of a vector space, Finitely generated vector space, Existence theorem for basis of a finitely generated vector space, Finite dimensional vector spaces.			
Section-II Invariance of the number of elements of bases sets, Dimensions, Quotient space and its dimension, Homomorphism and isomorphism of vector spaces, Linear transformations and linear forms on vector spaces, Vector space of all the linear transformations.			
Section -III Dual spaces, Bidual spaces, Annihilator of subspaces of finite dimensional vector spaces, Null space, Range space of a linear transformation, Rank and Nullity theorem.			
Section-IV Algebra of linear transformation, Minimal polynomial of a linear transformation, Singular and non-singular linear transformations, Matrix of a linear transformation, Change of basis, Eigen values and eigen vectors of linear transformations.			
Practical/ Computational Work (Based on course Linear Algebra) Practical: 10(Internal)+20(External)=30 There will be five questions in all, and the students must attempt any three questions. The question paper will set on the spot jointly by the internal and external examiners. Distribution of Marks will be as follows: i) Written Practical/ Lab work : 10 Marks ii) Viva-voce and practical record: 10 Marks.			
List of Practicals Following is the list of programmes to be performed in the Lab using MATLAB:			
1. Basic vector operations (Programs to do vector addition, scalar multiplication). 2. Checking vector space properties (Program to check closure under addition and scalar multiplication property). 3. Span (Program to determining the set of all possible linear combinations of a set of vectors). 4. Linear independence (Programs to check if a set of vectors can be expressed as a linear combination of the others.). 5. Basis (Program to find a set of linearly independent vectors that span the entire vector space). 6. Subspaces (Program to verify if a subset of a vector space is itself a vector space). 7. Quotient space (Program to find basis of a quotient space).			

Date of PG BOS & R: July 22, 2025

8. Vector spaces isomorphism verification (Program to verify if the given linear transformation is isomorphism or not).
9. Practical based on evaluating sum and scalar multiplication of linear transformations.
10. Practical based on computing rank and nullity of a given linear transformation.
11. Practical based on verification of Rank-Nullity theorem.
12. Practical based on evaluating null Space and range space of a linear transformation
13. Practical based on plotting of linear transformation.
14. Practical based on identification of singular and non-singular linear transformations.
15. Practical based on finding eigen values and eigen vectors of a given linear transformation.

Date of PGBOS&R: July 22, 2025

Semester V

Name of the Course	Dynamics	Course Code	25IMSMA504
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Students will be able to analyze particle motion in different directions, apply concepts of relative motion, and solve problems on simple harmonic motion and elastic strings.. CLO2 Students will be able to apply Newton's laws to problems involving mass, momentum, work, power, energy, and distinguish between conservative and impulsive forces. CLO3 Students will be able to solve problems related to motion on plane curves, projectile motion, and apply vector methods to angular velocity. CLO 4 Students will be able to analyze rigid body motion, central orbits, Kepler's laws, and describe particle motion in three dimensions using different coordinate systems.			
Section – I Velocity and acceleration along radial, Transverse, Tangential and Normal directions: Relative velocity and acceleration. Simple harmonic motion. Elastic strings.			
Section – II Mass, Momentum and Force. Newton's laws of motion. Work, Power and Energy. Definitions of Conservative forces and Impulsive forces.			
Section - III Motion on smooth and rough plane curves. Projectile motion of a particle in a plane. Vector angular velocity.			
Section – IV General motion of a rigid body. Central Orbits, Kepler laws of motion. Motion of a particle in three dimensions. Acceleration in terms of different co-ordinate systems

Date of PGBOS&R: July 22, 2025

Semester - V

Name of the Course	Testing of Hypothesis	Course Code	25IMSST501
Maximum Marks	Theory: 20(Internal)+50(External)=70 Practical: 10(Internal)+20(External)=30	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Acquire knowledge of various sampling distributions and their applications in statistical inference. CLO-2: Understand the basic concepts and procedures of hypothesis testing. CLO-3: Develop the ability to apply large sample and small sample tests for statistical decision-making. CLO-4: Gain skills to construct confidence intervals and apply one-sample and two-sample hypothesis tests for location problems.			
Section – I Population, Sample, Parameter, Statistic, Standard Error, Concepts of Statistical Hypothesis, Null and Alternative Hypotheses, Critical Region, Type of Errors, Level of Significance and Power of the Test, degree of freedom. One and Two Tailed Tests. Large Sample Tests and Confidence Intervals for Single Mean and Difference of Two Means, Single Proportion, Difference of Proportions. Standard Deviation			
Section – II Sampling Distribution: Student's t-Distribution. Properties and its Applications. Small Sample Tests and Confidence Intervals for Single Mean, Difference of dependent and independent sample Means and Paired Sample.			
Section – III Sampling Distribution: Chi-Square (χ^2)-Distribution, Definitions, Properties and its Applications. Chi-Square (χ^2)-test for Goodness of Fit and Independence of Attributes.			
Section – III Sampling Distribution: F-Distribution, Properties and its Applications. F-test for Equality of Variances. One Way and Two Way ANOVA.			
Practical/ Computational Work (Based on course Testing of Hypothesis) Practical: 10(Internal)+20(External)=30 There will be five questions in all, and the students must attempt any three questions. The question paper will set on the spot jointly by the internal and external examiners. Distribution of Marks will be as follows: i) Written Practical/ Lab work : 10 Marks ii) Viva-voce and practical record: 10 Marks List of Practicals Following is the list of programmes to be performed in the Lab using MS-excel: 1. Perform Various Test to Check the Normality of a Dataset. 2. Use the z-distribution to Calculate Confidence Intervals for a Given Dataset and Understand Its			

Date of PG BOS & R: July 22, 2025

- Application in Hypothesis Testing.
3. Use the t-distribution to Calculate Confidence Intervals for a Given Dataset and Understand Its Application in Hypothesis Testing.
 4. Practical problems on applications of t-test.
 5. Explore the χ^2 Distributions to Calculate Confidence Intervals for a Given Dataset and Understand Its Application in Hypothesis Testing.
 6. Practical problems on Chi-Square test.
 7. Explore the F to Calculate Confidence Intervals for a Given Dataset and Understand Its Application in Hypothesis Testing.
 8. Implement One Way Analysis of Variance (ANOVA) to Compare Means across Multiple Groups.
 9. Implement Two Way Analysis of Variance (ANOVA) to Compare Means across Multiple Groups.

Date of PG BOS & R: July 22, 2025

Semester VI

Name of the Course	Hydrostatics	Course Code	25IMSMA601
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Demonstrate a fundamental understanding of hydrostatics, including pressure, equilibrium, and the variation of pressure in static fluids, and apply these concepts to real-world scenarios. CLO 2: Calculate the magnitude and location of hydrostatic pressure forces on both plane and curved submerged surfaces, and analyze pressure variation using absolute and gauge pressure concepts. CLO 3: Evaluate the stability and response of floating structures to changes in geometry and weight distribution, and determine buoyant forces acting on floating bodies. CLO 4: Explain the principles of buoyancy and floatation, and analyze the behavior of fluids under various conditions, including the standard atmosphere and gas laws.			
Section – I Pressure equation. Condition of equilibrium. Lines of force. Homogeneous and heterogeneous fluids. Elastic fluids. Surface of equal pressure. Fluid at rest under action of gravity. Rotating fluids.			
Section – II Fluid pressure on plane surfaces. Centre of pressure. Resultant pressure on curved surfaces. Equilibrium of floating bodies. Curves of buoyancy. Surface of buoyancy.			
Section – III Stability of equilibrium of floating bodies. Metacentre. Work done in producing a displacement. Vessels containing liquid.			
Section – IV Gas laws. Mixture of gases. Internal energy. Adiabatic expansion. Work done in compressing a gas. Isothermal atmosphere. Connective equilibrium.			
Books Recommended: 1. S.L. Loney, An Elementary Treatise on the Dynamics of a Particle and of Rigid Bodies, Cambridge University Press, 1956. 2. A.S. Ramsey, Dynamics, Part I, Cambridge University Press, 1973. 3. W.H. Basant and A.S. Ramsey, A Treatise on Hydromechanics, Part I Hydrostatics, ELBS and G. Bell and Sons Ltd., London.			

Date of PG BOS & R: July 22, 2025

Sémaster VI

Name of the Course	Numerical Analysis	Course Code	25IMSMA602
Maximum Marks	Theory: 20(Internal)+50(External)=70 Practical: 10(Internal)+20(External)=30	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Obtain numerical solutions of algebraic and transcendental equations CLO2 Find numerical solutions of system of linear equations and check the accuracy of the solutions CLO3 Learn about various interpolating and extrapolating methods CLO4 Solve initial and boundary value problems in differential equations using numerical methods Apply various numerical methods in real life problems.			
Section – I Round-off error and computer arithmetic, Local and global truncation errors, Algorithms and convergence; Bisection method, False position method, Fixed point iteration method, Newton's method and secant method for solving equations. Partial and scaled partial pivoting, Lower and upper triangular (LU) decomposition of a matrix and its applications, Thomas method for tridiagonal systems; Gauss-Jacobi, Gauss Seidel and successive over-relaxation (SOR) methods.			
Section – II Lagrange and Newton interpolations, Piecewise linear interpolation, Cubic spline interpolation, Finite difference operators, Gregory-Newton forward and backward difference interpolations.			
Section – III First order and higher order approximation for first derivative, Approximation for second derivative; Numerical integration: Trapezoidal rule, Simpson's rules and error analysis, Bulirsch-Stoer extrapolation methods, Richardson extrapolation.			
Section – IV Picard's method, Taylor Series method, Euler's method, Runge-Kutta methods, Higher order one step method, Multi-step methods; Finite difference method, Shooting method.			
Practical/ Computational Work (Based on course Numerical Analysis) Practical: 10(Internal)+20(External)=30 There will be five questions in all, and the students must attempt any three questions. The question paper will set on the spot jointly by the internal and external examiners. Distribution of Marks will be as follows: i) Written Practical/ Lab work : 10 Marks ii) Viva-voce and practical record: 10 Marks			
List of Practicals Following is the list of programmes to be performed in the Lab using Python/SciLab/ MATLAB/Maxima: • Write a program to implement the bisection method for finding roots of a nonlinear equation. • Write a program to implement the false position (regula falsi) method for root finding. • Write a program to implement the fixed-point iteration method.			

Date of PGBOS&R: July 22, 2025

- Write a program to implement Newton's method for solving equations.
- Write a program to implement the secant method for solving equations.
- Write a program to compare round-off and truncation errors for a simple function.
- Write a program to implement Gaussian elimination with partial pivoting.
- Write a program to implement Gaussian elimination with scaled partial pivoting.
- Write a program to implement LU decomposition for solving linear systems.
- Write a program to implement the Thomas algorithm for tridiagonal systems.
- Write a program to implement the Gauss–Jacobi iterative method.
- Write a program to implement the Gauss–Seidel iterative method.
- Write a program to implement the successive over-relaxation (SOR) method.
- Write a program to implement Lagrange interpolation.
- Write a program to implement Newton interpolation.
- Write a program to implement piecewise linear interpolation.
- Write a program to implement cubic spline interpolation.
- Write a program to implement finite difference operators (forward, backward, central).
- Write a program to implement Gregory–Newton forward difference interpolation.
- Write a program to implement Gregory–Newton backward difference interpolation.
- Write a program to implement the trapezoidal rule for numerical integration.
- Write a program to implement Simpson's 1/3 and 3/8 rules for numerical integration.
- Write a program to implement Richardson extrapolation for numerical integration.
- Write a program to implement Picard's method for solving first-order ODEs.
- Write a program to implement the Taylor series method for solving ODEs.
- Write a program to implement Euler's method for solving ODEs.
- Write a program to implement Runge–Kutta methods (2nd and 4th order) for solving ODEs.
- Write a program to implement a higher-order one-step method (e.g., Runge–Kutta–Fehlberg).
- Write a program to implement a multistep method (e.g., Adams–Bashforth or Adams–Moulton).
- Write a program to implement the finite difference method for solving two-point boundary value problems.
- Write a program to implement the shooting method for solving boundary value problems.

Semester VI

Name of the Course	Metric Spaces	Course Code	25IMSMA603
Maximum Marks	Theory: 30(Internal)+70(External)=10	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Explain the fundamental concepts of metric spaces, including metrics, open and closed sets, and neighbourhood systems. CLO2: Determine the convergence and limit points of sequences in metric spaces. CLO3: Analyze continuity and uniform continuity of functions in the context of metric spaces. CLO4: Apply the concepts of compactness and completeness to solve related problems in metric spaces.			
Section – I (Introduction to Metric Spaces) Definition of a metric space, Examples of metric spaces (Euclidean, discrete, Usual metric space and $\mathbb{I}^p$ space). Bounded sequence in metric space and semi-metric space. Distance between point and subset, Distance between two subsets and diameter of a subset. Bounded and unbounded metric spaces.			
Section-II (Topology Induced by a Metric) Basis for a topology. Open and closed balls. Neighborhoods, Limit points, Interior points, Open and closed sets, Closure and interior and boundary points of a set. Sub-spaces of a metric space and their properties and examples, Equivalent metrics.			
Section-III (Completeness, Continuity and Uniform Continuity in Metric Spaces) Cauchy sequences, Convergent sequences, Complete metric spaces and Examples of complete/incomplete metric spaces. Subsequences and Cantor's intersection theorem. Nowhere dense set, first and second category space and Baire's category theorem. Contraction mapping principle (Banach Fixed Point Theorem) and applications of the contraction principle. Continuous functions between metric spaces, Uniform continuity and isometry.			
Section-IV (Compactness and Connectedness in Metric Spaces) Open cover, Subcover, Compact set and compact metric space. Sequentially compact metric space, Countable compact spaces and finite intersection property. ϵ -Net and total boundedness, Continuity and compactness theorem. Separated sets, Connected sets, Disconnected sets, Path-connectedness and their properties and examples. Component of a metric space, Continuity and connectedness theorem.

Introductory Functional Analysis with Applications. John Wiley & sons.			

Date of PG BOS & R: July 22, 2025

Semester VI

Name of the Course	Complex Analysis	Course Code	25IMSMA604
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Be familiar with complex numbers and their geometrical interpretations. CLO 2: Understand the concept of complex numbers as an extension of the real numbers. CLO 3: Represent the sum function of a power series as an analytic function. CLO 4: Demonstrate the ideas of complex differentiation and integration for solving related problems and establishing theoretical results. CLO 5: Understand concept of residues, evaluate contour integrals and solve polynomial equations.			
Section-I Function of a complex variable, Continuity, Differentiability, Analytic functions and their properties, Cauchy-Riemann equations in cartesian and polar coordinates, Power series, Radius of convergence, Differentiability of sum function of a power series, Branches of many valued functions with special reference to $\arg z$, $\log z$ and z^n.			
Section-II Path in a region, Contour, Complex integration. Cauchy theorem, Cauchy integral formula, Extension of Cauchy integral formula for multiple connected domain, Poisson integral formula, Higher order derivatives, Complex integral as a function of its upper limit, Morera theorem, Cauchy inequality, Liouville theorem, Taylor theorem.			
Section-III Zeros of an analytic function, Laurent series, Isolated singularities, Cassorati-Weierstrass theorem, Limit point of zeros and poles. Maximum modulus principle, Schwarz lemma, Meromorphic functions, Argument principle, Rouché theorem, Fundamental theorem of algebra, Inverse function theorem.			
Section-IV Calculus of residues, Cauchy residue theorem, Evaluation of integrals of the types $\int_0^{2\pi} f(\cos t, \sin t) dt$, $\int_{-\infty}^{\infty} f(x) dx$, $\int_0^{\infty} f(x) \sin mx dx$ and $\int_0^{\infty} f(x) \cos mx dx$, Conformal mappings. Space of analytic functions and their completeness, Hurwitz theorem, Montel theorem, Riemann mapping theorem.

Date of PG BOS & R: July 22, 2025

Semester - VI

Name of the Course	Design of Experiments	Course Code	25IMSST601
Maximum Marks	Theory: 20(Internal)+50(External)=70 Practical: 10(Internal)+20(External)=30	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Students Acquired The Proficiency in Assessing the Appropriateness of Experimental Designs in Handling Extraneous Variables. CLO 2: Students Acquired The Competence in Designing and Analysing Experiments for Both One-Directional and Two-Directional Variations. CLO 3: Students Acquired The Proficiency in the Analysis of Specific Experimental Designs such as CRD, RBD and LSD. CLO 4: Students Acquired The Skill in Estimating Missing Observations and Subsequently Conducting a thorough Analysis of the Experimental Data. CLO 5: Students Acquired The Profound Understanding of Treatment Allocation in Factorial Experiments with Two Levels and Adeptness in Analysing Such Designs using Yate's Technique.			
Section – I Linear Models: Standard Gauss Markov Models, Estimation of Parameters, Best Linear Unbiased Estimator, Method of Least Squares, Gauss-Markov Theorem, Variance-Covariance Matrix of Blues.			
Section – II General Theory of Analysis of Experimental Designs, Principles of Experimental Designs, Analysis of Variance for One- Way, Two -Way With One/M Observations Per Cell for Fixed and Random Effects Models, Post-Hoc Tests, Tukey's Test for Non-Additivity.			
Section – III Analysis of Completely Randomized Design, Randomized Block Design and Latin Square Designs. Missing Plot Techniques and their Analyses for Randomized Block Design and Latin Square Designs.			
Section – IV Analysis of Covariance for CRD and RBD, Factorial Experiments: Definition, Advantages, Yate's Method for of Computing Factor's Effect, Analysis of $2^2, 2^3$ and 2^n Factorial Design, Confounding and Partial Confounding.			
Practical/ Computational Work (Based on course Statistical Methods) Practical: 10(Internal)+20(External)=30 There will be five questions in all, and the students must attempt any three questions. The question paper will set on the spot jointly by the internal and external examiners. Distribution of Marks will be as follows: i) Written Practical/ Lab work : 10 Marks ii) Viva-voce and practical record: 10 Marks			

Date of PG BOS & R: July 22, 2025

List of Practicals

Following is the list of programmes to be performed in the Lab using MS-excel:

1. Calculate the BLUE for a Given Linear Model using the Method of Least Squares on a Dataset.
2. Compute the Variance-Covariance Matrix of BLUEs for a Set of Parameters using a Dataset.
3. Conduct ANOVA on a Dataset with One-Way Variation, Considering both Fixed and Random Effects Models.
4. Conduct Two-Way ANOVA with One Observation per Cell on a Dataset considering both Fixed and Random Effects Models.
5. Conduct Two-Way ANOVA with m Observation per Cell on a Dataset considering both Fixed and Random Effects Models.
6. Design and Analyze an Experiment Following the Principles of CRD using a Given Dataset.
7. Implement a Randomized Block Design and Perform the Corresponding Analysis on a Dataset.
8. Design and Analyze an Experiment using Latin Square Designs, Incorporating Missing Plot Techniques.
9. Apply ANCOVA to Analyze Datasets with Covariates in both CRD and RBD Setups.
10. Design and Analyze a 22, 23 Factorial Experiment for Exploring Interactions and Main Effects.

Date of PGBOS&R: July 22, 2025

Semester-VII

Name of the Course	Abstract Algebra	Course Code	25IMSMA701
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Apply group theoretic reasoning to group actions CLO 2: Learn properties and analysis of solvable & nilpotent groups, Noetherian & Artinian modules and rings. CLO 3: Apply Sylow's theorems to describe the structure of some finite groups and use the concepts of isomorphism and homomorphism for groups and rings. CLO 4: Use various canonical types of groups and rings- cyclic groups and groups of permutations, polynomial rings and modular rings. CLO 5: Analyze and illustrate examples of composition series, normal series, subnormal series.			
Section-I Sylow theorems: p-groups, Sylow subgroups, Applications of Sylow theorems, Description of group of order p^2 and pq, Survey of groups upto order 15.			
Section-II Normal and subnormal series, Solvable series, Derived series, Solvable groups, Solvability of S_n-the symmetric group of degree $n \geq 2$, Central series, Nilpotent groups and their properties, Equivalent conditions for a finite group to be nilpotent, Composition series, Zassenhaus lemma, Jordan-Holder theorem.			
Section-III Modules, Cyclic modules, Simple and semi-simple modules, Schurs' lemma, Free modules, Modules over principal ideal domain and its applications to finitely generated abelian groups.			
Section-IV Noetherian and Artinian modules, Modules of finite length, Noetherian and Artinian rings, Hilbert basis theorem. $\text{Hom}_R(R,R)$, Nil and Nilpotent ideals, Opposite rings, Wedderburn – Artin theorem.

Date of PGBOS&R: July 22, 2025

Semester-VII

Name of the Course	Mathematical Analysis	Course Code	25IMSMA702
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Understand Riemann Stieltjes integral, its properties and rectifiable curves. CLO 2: Learn about pointwise and uniform convergence of sequence and series of functions and various tests for uniform convergence. CLO 3: Find the stationary points and extreme values of implicit functions. CLO 4: Be familiar with the chain rule, partial derivatives and concept of derivation in an open subset of $\mathbb{R}^n$.			
Section-I Riemann-Stieltjes integral, Existence and properties, Integration and differentiation, The fundamental theorem of calculus, Integration of vector-valued functions, Rectifiable curves.			
Section-II Sequence and series of functions, Point wise and uniform convergence, Cauchy criterion for uniform convergence, Weirstrass Mtest, Abel and Dirichlet tests for uniform convergence, Uniform convergence and continuity, Uniform convergence and differentiation, Weierstrass approximation theorem.			
Section-III Power series, uniform convergence and uniqueness theorem, Abel theorem, Tauber theorem. Functions of several variables, Linear Transformations, Euclidean space $\mathbb{R}^n$, Derivatives in an open subset of $\mathbb{R}^n$. Chain Rule, Partial derivatives, Continuously Differentiable Mapping, Young and Schwarz theorems.			
Section-IV Taylor theorem, Higher order differentials, Explicit and implicit functions, Implicit function theorem, Inverse function theorem, Change of variables, Extreme values of explicit functions, Stationary values of implicit functions, Lagrange multipliers method, Jacobian and its properties.

Date of PG BOS & R: July 22, 2025

Semester-VII

Name of the Course	Discrete Mathematics	Course Code	25IMSMA703
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Understand and apply discrete numeric functions, generating functions, and solve recurrence relations using both algebraic and generating function methods. CLO2: Analyze algebraic structures such as groups, rings, and lattices, and demonstrate understanding of their fundamental properties. CLO3: Apply Boolean algebra to simplify logic expressions and design efficient digital circuits using Karnaugh maps and switching theory. CLO4: Develop problem-solving skills in number theory, including divisibility, modular arithmetic, and congruences. CLO5: Use mathematical reasoning to connect abstract concepts from discrete mathematics to real-world applications in computing and engineering.			
Section – I Discrete numeric functions, Generating functions, recurrence relations with constant coefficients. Homogeneous solution, particular relations, total rotation, Solution of recurrence relation by the method of generating functions.			
Section-II Semigroups, Lattices and their properties, lattice as algebraic system, Bounded, Complement and distributive lattices.			
Section-III Boolean algebra, definition and examples, properties, duality, distributive and complemented Calculus. Design and implementation of digital networks, switching circuits, Karnaugh map.			
Section-IV The division algorithm, different bases, the equation $ax + by = n$, the bracket function and binomial coefficients, the ϕ -function, the order of an integer modulo m , periodic decimals.

Date of PG BOS & R: July 22, 2025

Semester-VII

Name of the Course	Ordinary Differential Equations-II	Course Code	25IMSMA704
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Many fundamental laws of physics and chemistry can be formulated as differential equations. CLO 2: Learn to illustrate the concept of identification of differential equations, some analytical techniques to find solutions. CLO 3: Students will also be able to explain about stability theory.			
Section-I Preliminaries: Initial value problem and equivalent integral equation. Lipschitz condition, Picard Fundamental existence and uniqueness theorem for $dy/dt = f(t,y)$, Dependence of solutions on initial conditions and parameters, Solution of initial-value problems by Picard method.			
Section-II Sturm-Liouville BVPs, Sturm's Separation and Comparison theorems, Lagrange's identity and Green's formula for second order differential equations, Properties of eigenvalues and eigen functions, Prufer transformation.			
Section-III Adjoint systems. Self-adjoint equations of second order. Linear systems, Matrix method for homogeneous first order system of linear differential equations. Fundamental set and fundamental matrix, Wronskian of a system, Method of variation of constants for a nonhomogeneous system with constant coefficients, nth order differential equation equivalent to a first order system.			
Section-IV Nonlinear differential system, Plane autonomous systems and critical points, Classification of critical points – rotation points, foci, nodes, saddle points. Stability, Asymptotical stability and instability of critical points. Almost linear systems, Liapunov function and Liapunov's method to determinestability for nonlinear systems, Periodic solutions and Floquet theory for periodic systems, Limit cycles, Bendixson non-existence theorem, Poincare-Bendixson theorem(Statement only), Index of a critical point.

Date of PG BOS & R: July 22, 2025

Semester-VII

Name of the Course	Mechanics	Course Code	25IMSMA705
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Be familiar with continuum model of fluid flow and classify fluid/flows based on physical properties of a fluid/flow along with Eulerian and Lagrangian descriptions of fluid motion. CLO2: Derive and solve equation of continuity, equations of motion, vorticity equation, equation of moving boundary surface, pressure equation and equation of impulsive action for a moving inviscid fluid. CLO3: Calculate velocity fields and forces on bodies for simple steady and unsteady flow including those derived from potentials. CLO4: Understand the concepts of velocity potential, stream function and complex potential, and their use in solving two-dimensional flow problems applying complex-variable techniques. CLO5: Represent mathematically the potentials of source, sink and doublets in two-dimensions as well as three-dimensions, and study their images in impermeable surfaces.			
Section – I Moments and products of Inertia, Theorems of parallel and perpendicular axes, Angular momentum of a rigid body about a fixed point and about a fixed axes, Principal axes, Kinetic energy of a rigid body rotating about a fixed point, Momental ellipsoid- Equimomental systems, Coplanar distributions. Euler's dynamical equations for the motion of a rigid body about a fixed point, Further properties of Rigid body motion under no forces.			
Section – II Generalized co-ordinates. Holonomic and Non-holonomic systems. Scleronomic and Rheonomic systems. Lagrange's equations for a simple holonomic dynamical system, Lagrange's equations for conservative and impulsive forces. Kinetic energy as a quadratic functions of velocities. Generalized potential, Energy equation for conservative fields. Hamilton's canonical variables. Donkin's theorem. Hamilton canonical equations. Cyclic coordinates. Routh's procedure.			
Section – III Poisson Bracket. Poisson's Identity. Jacobi-Poisson Theorem. Hamilton's Principle. Principle of Least action. Poincare Cartan Integral invariant. Whittaker's equations. Jacobi's equations. Hamilton-Jacobi equation. Jacobi theorem. Method of Separation of variables. Lagrange Brackets, Canonical Transformations, Condition of canonical character of a transformation in terms of Lagrange and Poisson brackets. Invariance of Lagrange and Poisson brackets under canonical transformations.			
Section – IV Gravitation: Attraction and potential of rod, disc, spherical shells and sphere. Laplace and Poisson equations. Work done by self-attracting systems. Distributions for a given potential. Equipotential surfaces. Surface and solid harmonics. Surface density in terms of surface harmonics.

Date of PGBOS&R: July 22, 2025

Semester - VII

Name of the Course	Statistical Inference	Course Code	25IMSST701
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Able to draw conclusions about the whole population on the basis of a sample. CLO 2: Understand the concept the concept of estimations, unbiasedness, sufficiency and consistency. CLO 3: Perform Regression Analysis. CLO 4: Able to explain statistical hypothesis and non- parametric theory. CLO 5: Understand non- parametric test.			
Section – I Estimation: Introduction to the problem of estimation, Concepts of Unbiasedness, Sufficiency, Completeness, Consistency, Efficiency. Minimum Variance Unbiased Estimator (MVUE), Neymann Factorization theorem. Exponential Family of Distributions and its Properties, Rao-Blackwell and Lehmann-Scheffe theorems and their applications. Cramer-Rao inequality and MVB estimators (statement and applications).			
Section – II Methods of Estimation: Method of moments, method of maximum likelihood estimation, method of minimum Chi-square. Statistical hypotheses, critical region, size and power of a test, most powerful test, randomized and non randomized test, Neyman Pearson lemma and its applications, uniformly most powerful unbiased test, Likelihood Ratio test and its applications, Power functions of UMP tests with simple illustrations.			
Section – III Order Statistics, their Marginal and Joint Distributions. Distributions of Median and Range. Moments of Order Statistics. Asymptotic Distribution of Order Statistics. Elements of decision problems: Loss function, risk function, estimation and testing viewed as decision problems. Bayes rule.			
Section – IV Non Parametric Tests: Ordinary Sign test, Wilcoxon Signed Rank test, and their Comparison (one sample and paired sample problems). General problem of Ties. Goodness of Fit problem : Chi-Square test and Kolmogrov-Smirnov one sample test, and their comparison. Two sample problem: Kolmogrov-Smirnov two sample test, Wald – Wolfwitz Run test, Mann –Whitney U test, Median test.

Name of the Course	Topology	Course Code	25SIMSMA801
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Understand the concepts of topological space and continuous functions. CLO 2: Learn to generate new topologies from a given set with bases. CLO 3: Learn to describe the concept of homeomorphism and topological invariants CLO 4: Be familiar with connectedness and compactness of topological spaces. CLO 5: Learn about separation axioms and their properties.			
Section-I Definition and examples of topological spaces. Comparison of topologies on a set, Intersection and union of topologies on a set. Neighborhoods, Interior point and interior of a set, Closed set as a complement of an open set, Adherent point and limit point of a set, Closure of a set, Derived set, Properties of Closure operator, Boundary of a set, Dense subsets, Interior, Exterior and boundary operators. Alternative methods of defining a topology in terms of neighborhood system and Kuratowski closure operator.			
Section-II Relative(Induced) topology, Base and subbase for a topology, Base for Neighbourhood system. Continuous functions. Open and closed functions, Homeomorphism. Connectedness and its characterization, connected subsets and their properties, Continuity and connectedness, Components, locally connected spaces.			
Section-III Relative(Induced) topology, Base and subbase for a topology, Base for Neighbourhood system. Continuous functions, Open and closed functions, Homeomorphism. Connectedness and its characterization, connected subsets and their properties, Continuity and connectedness, Components, locally connected spaces.			
Section-IV First countable, second countable and separable spaces, hereditary and topological property, Countability of a collection of disjoint open sets in separable and second countable spaces, Lindelof theorem. T_0 , T_1 , T_2 (Hausdorff) separation axioms, their characterization and basic properties.

Semester -VIII

Date of PGBOS&R: July 22, 2025

Semester -VIII

Name of the Course	Analytical Number Theory	Course Code	25IMSMA802
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Know about the classical results related to prime numbers and get familiar with the irrationality of e and π . CLO 2: Study the algebraic properties of U_n and Q_n . CLO 3: Learn about the Waring problems and their applicability. CLO 4: Learn the definition, examples and simple properties of arithmetic functions and about perfect numbers. CLO 5: Understand the representation of numbers by two or four squares.			
Section-I Distribution of primes, Fermat and Mersenne numbers, Farey series and some results concerning Farey series, Approximation of irrational numbers by rationals, Hurwitz theorem, Irrationality of e and π .			
Section-II The arithmetic in Z_n , The group U_n , Primitive roots and their existence, the group U_p^n (p -odd) and U_2^n , The group of quadratic residues Q_n , Quadratic residues for prime power moduli and arbitrary moduli, The algebraic structure of U_n and Q_n .			
Section-III Riemann Zeta Function $\zeta(s)$ and its convergence. Application to prime numbers, $\zeta(s)$ as Euler product, Evaluation of $\zeta(2)$ and $\zeta(2k)$. Diophantine equations $ax + by = c$, $x^2 + y^2 = z^2$ and $x^4 + y^4 = z^4$, The representation of number by two or four squares, Waring problem, Four square theorem, The numbers $g(k)$ & $G(k)$, Lower bounds for $g(k)$ & $G(k)$.			
Section-IV Arithmetic functions $\phi(n)$, $\tau(n)$, $\sigma(n)$ and $\sigma_k(n)$, $U(n)$, $N(n)$, $I(n)$, Definitions and examples and simple properties, Perfect numbers, Mobius inversion formula, The Mobius function μ_n , The order and average order of the function $\phi(n)$, $\tau(n)$ and $\sigma(n)$.

Date of PGBOS&R: July 22, 2025

Semester -VIII

Name of the Course	Integral Equations and Calculation of Variations	Course Code	25IMSMA803
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Understand the methods to reduce Initial value problems associated with linear differential equations to various integral equations. CLO 2: Categorise and solve different integral equations using various techniques. CLO 3: Describe importance of Green's function method for solving boundary value problems associated with non-homogeneous ordinary and partial differential equations, especially the Sturm-Liouville boundary value problems. CLO 4: Learn methods to solve various mathematical and physical problems using variational techniques.			
Section-I Linear Integral equations, Some basic identities, Initial value problems reduced to Volterra integral equations, Methods of successive substitution and successive approximation to solve Volterra integral equations of second kind, Iterated kernels and Neumann series for Volterra equations. Resolvent kernel as a series. Laplace transform method for a difference kernel. Solution of a Volterra integral equation of the first kind.			
Section-II Boundary value problems reduced to Fredholm integral equations, Methods of successive approximation and successive substitution to solve Fredholm equations of second kind, Iterated kernels and Neumann series for Fredholm equations. Resolvent kernel as a sum of series. Fredholm resolvent kernel as a ratio of two series. Fredholm equations with separable kernels. Approximation of a kernel by a separable kernel, Fredholm Alternative, Non homogenous Fredholm equations with degenerate kernels.			
Section-III Green function, Use of method of variation of parameters to construct the Green function for a nonhomogeneous linear second order boundary value problem, Basic four properties of the Green function, Alternate procedure for construction of the Green function by using its basic four properties. Reduction of a boundary value problem to a Fredholm integral equation with kernel as Green function, Hilbert-Schmidt theory for symmetric kernels.			
Section-IV Motivating problems of calculus of variations, Shortest distance, Minimum surface of resolution, Brachistochrone problem, Isoperimetric problem, Geodesic. Fundamental lemma of calculus of variations, Euler equation for one dependent function and its generalization to 'n' dependent functions and to higher order derivatives. Conditional extremum under geometric constraints and under integral constraints.

Date of PG BOS & R: July 22, 2025

Semester -VIII

Name of the Course	Partial Differential Equations-II	Course Code	25SIMSMA804
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Understand the theory of partial differential equations CLO 2: Categorise and solve different integral equations using various techniques. CLO 3: Describe importance of Green's function method for solving boundary value problems associated with partial differential equations. CLO 4: Learn methods to solve wave equation, heat equation and laplace equation using method of separation of variables, Fourier transforms, Numerical and approximate methods etc.			
Section-I First Order P.D.E.: Curves and surfaces, Genesis of first order P.D.E., Classification of integrals, Compatible systems, Charpit's method, Integral Surfaces through a Given curve, Quasi-Linear Equations, Method of separation of variables.			
Section-II Second Order P.D.E, Genesis of Second Order P.D.E., Classification of Second Order P.D.E., One Dimensional Wave Equation: Vibrations of an Infinite Strings, Vibrations of a Semi-Infinite String, Vibrations of a string of finite length.			
Section-III Laplace's Equations: Boundary Value problems, Maximum and Minimum Principles, The Cauchy Problem, The Dirichlet Problem for upper half plane, The Neumann Problem for upper half plane, The Dirichlet problem for a circle, The Dirichlet Exterior problem for a circle, The Neumann problem for a circle, the Dirichlet problem for a rectangle.			
Section-IV Heat Conduction Problem: Heat conduction- Infinite rod case, Heat conduction- finite rod case, Duhamel's principle, Heat Conduction Equation, Classification in the case of n-variables, Families of Equipotential Surfaces, Kelvin's Inversion theorem.

Evans: Partial Differential Equations(American Mathematical Society).			

Date of PG BOS & R: July 22, 2025

Semester – VIII

Name of the Course	Differential Geometry	Course Code	25IMSMA805
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CO1 Describe the basic features of curves and parametric families of surfaces in Euclidean space. CO2 Be familiar with the concepts of envelope, edge of regression and developable surfaces. CO3 Acquire knowledge of the normal curvature of a surface and its connection with the first and second fundamental forms. CO4 Understand the concepts of surface of revolution, asymptotic lines, curvature and torsion, isometric parameters and minimal curves. CO5 Have knowledge of geodesics on a surface, their characterization, torsion of geodesic, Bonnet theorem and its implication for a geodesic triangle.			
Section – I One Parameter family of Surfaces: Envelope, Characteristics, Edge of regression, Developable surfaces. Developables Associated with a Curve: Osculating developable, Polar developable, Rectifying developable.			
Section – II Two- parameter Family of Surfaces:Envelope, Characteristics points, Curvilinear coordinates, First order magnitudes, Directions on a surface, The normal, Second order magnitudes, Derivatives of n.			
Section III Curves on a Surface: Principal directions and curvatures, First and second curvatures, Euler's theorems, Dupin's indicatrix, The surfaces $z = f(x,y)$, Surface of revolution. Conjugate directions, Conjugate systems. Asymptotic lines, Curvature and torsion, Isometric parameters, Null lines, minimal curves.			
Section IV Geodesics and Geodesic Parallels:Geodesics: Geodesic property, Equation of Geodesics, Surface of revolution, Torsion of Geodesic. Curves in Relation to Geodesics: Bonnet's theorem, Joachimsthal's theorems, Vector curvature, Geodesic curvature κ_g . Other formulae for κ_g , Bonnet's formula.			
Books Recommended: 1. A.K. Singh and P.K. Mittal , A Textbook of Differential Geometry, Har-Anand Publications. 2. C.E. Weatherburn, Differential Geometry of Three Dimensions, Radhe Publishing House. 3. Erwin Kreyszig, Differential Geometry, Dover Publications Inc., New edition.			

Date of PGBOS&R: July 22, 2025

Semester VIII

Name of the Course	Optimization Techniques	Course Code	25IMSST801
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Understand and Analyze the Association of Attributes. CLO 2: Measure and Interpret Correlation. CLO 3: Perform Regression Analysis. CLO 4: Apply the Method of Least Squares. CLO 5: Interpret and Apply Statistical Relationships in Practice. CLO 6: Apply Statistical Methods in Practical Contexts.			
Section – I Convex Sets and Functions. Linear Programming Problems: Formulation, Examples and Forms. Properties of a Solution to the LPP. Development of Optimum Feasible Solution. Solution of LPP by Graphical and Simplex Methods.			
Section – II Artificial Variable Techniques: Big-M-Method and Two Phase Simplex Method. Degeneracy in LPP and its Resolution. The Revised Simplex Method. Duality in LPP: Symmetric and Un-Symmetric Dual Problems. Fundamental Duality Theorem. Complementary Slackness Theorem. Dual Simplex Method. Economic Interpretation of Duality.			
Section – III Post-Optimization Problems: Sensitivity Analysis and Parametric Programming. Integer Programming Problems (IPP). Gomory's Algorithm for Pure Integer Linear Programs. Solution of IPP by Branch and Bound Method. Applications of Integer Programming.			
Section – IV Transportation Problems: Mathematical Formulation and Fundamental Properties. Initial Basic Feasible Solution by North West Corner Rule, Lowest Cost Entry Method and Vogel's Approximation Method. Optimal Solution of Transportation Problems. Assignment Problems: Mathematical Formulation, Reduction Theorem and Solution by Hungarian Assignment Method.

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Measure and Integration Theory	Course Code	25IMSMA901
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Describe the shortcomings of Riemann integral and benefits of Lebesgue integral. CLO 2: Understand the fundamental concept of measure and Lebesgue measure. CLO 3: Learn about the differentiation of monotonic function, indefinite integral, use of the fundamental theorem of calculus.			
Section-I Set functions, Intuitive idea of measure, Elementary properties of measure, Measurable sets and their fundamental properties. Lebesgue measure of a set of real numbers, Algebra of measurable sets, Borel set, Equivalent formulation of measurable set in terms of open, Closed, F_σ and G_δ sets, Non measurable sets.			
Section-II Measurable functions and their equivalent formulations. Properties of measurable functions. Approximation of a measurable function by a sequence of simple functions, Measurable functions as nearly continuous functions, Egoroff theorem, Lusin theorem, Convergence in measure and F. Riesz theorem. Almost uniform convergence.			
Section-III Shortcomings of Riemann Integral, Lebesgue Integral of a bounded function over a set of finite measure and its properties. Lebesgue integral as a generalization of Riemann integral, Bounded convergence theorem, Lebesgue theorem regarding points of discontinuities of Riemann integrable functions, Integral of non-negative functions, Fatou Lemma, Monotone convergence theorem, General Lebesgue Integral, Lebesgue convergence theorem.			
Section-IV Vitali covering lemma, Differentiation of monotonic functions, Function of bounded variation and its representation as difference of monotonic functions, Differentiation of indefinite integral, Fundamental theorem of calculus, Absolutely continuous functions and their properties.

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Fluid Dynamics	Course Code	25IMSMA902
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Be familiar with continuum model of fluid flow and classify fluid/flows based on physical properties of a fluid/flow along with Eulerian and Lagrangian descriptions of fluid motion. CLO2: Derive and solve equation of continuity, equations of motion, vorticity equation, equation of moving boundary surface, pressure equation and equation of impulsive action for a moving inviscid fluid. CLO3: Calculate velocity fields and forces on bodies for simple steady and unsteady flow including those derived from potentials. CLO4: Understand the concepts of velocity potential, stream function and complex potential, and their use in solving two-dimensional flow problems applying complex-variable techniques. CLO5: Represent mathematically the potentials of source, sink and doublets in two-dimensions as well as three-dimensions, and study their images in impermeable surfaces.			
Section – I Kinematics - Eulerian and Lagrangian methods. Stream lines, path lines and streak lines. Velocity potential. Irrotational and rotational motions. Vortex lines. Equation of continuity. Boundary surfaces.			
Section – II Acceleration at a point of a fluid. Components of acceleration in cylindrical and spherical polar co-ordinates, Pressure at a point of a moving fluid. Euler's and Lagrange's equations of motion. Bernoulli's equation. Impulsive motion. Stream function.			
Section – III Acyclic and cyclic irrotation motions. Kinetic energy of irrotational flow. Kelvin's minimum energy theorem. Axially symmetric flows. Liquid streaming past a fixed sphere. Motion of a sphere through a liquid at rest at infinity. Equation of motion of a sphere. Three-dimensional sources, sinks, doublets and their images. Stoke's stream function.			
Section – IV Irrotational motion in two-dimensions. Complex velocity potential. Milne-Thomson circle theorem. Two-dimensional sources, sinks, doublets and their images. Blasius theorem. Two- dimensional irrotation motion produced by motion of circular and co-axial cylinders in an infinite mass of liquid.

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Mechanics of Solids-I	Course Code	25IMSMA903
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Get familiar with Cartesian tensors, as generalization of vectors, and their properties which are used in the analysis of stress and strain to describe the phenomenon of solid mechanics. CLO 2 Analyse the basic properties of stress and strain components, their transformations, extreme values, invariants and Saint-Venant principle of elasticity. CLO 3 Demonstrate generalized Hooke's law for three dimensional elastic solid which provides the linear relationship between stress components and strain components. CLO 4 Use different types of elastic symmetries to derive the stress-strain relationship for isotropic elastic materials for applications to architecture and engineering.			
Section-I Cartesian tensors: Cartesian tensors of different order, Properties of tensors, Symmetric and skew-symmetric tensors. Isotropic tensors of different orders and relation between them, Tensor invariants. Eigen-values and eigen vectors of a second order tensor, Scalar, vector, tensor functions, Comma notation, Gradient, Divergence and Curl of a tensor field.			
Section-II Analysis of Stress: Stress vector, stress components. Cauchy equations of equilibrium. Stress tensor. Symmetry of stress tensor. Stress quadric of Cauchy. Principal stress and invariants. Maximum normal and shear stresses. Mohr's diagram. Examples of stress.			
Section-III Analysis of Strain: Affine transformations. Infinitesimal affine deformation. Geometrical interpretation of the components of strain. Strain quadric of Cauchy. Principal strains and invariants. General infinitesimal deformation. Saint-Venant's equations of Compatibility. Finite deformations. Examples of uniform dilatation, simple extension and shearing strain.			
Section-IV Equations of Elasticity: Hooke's law and its generalization. Hooke's law in media with one plane of symmetry, orthotropic and transversely isotropic media, Homogeneous isotropic media. Elastic moduli for isotropic media. Equilibrium and dynamic equations for an isotropic elastic solid. Beltrami-Michell compatibility equations. Strain energy function and its connection with Hooke's law. Clapeyron's theorem. Saint-Venant's Principle(statement only).

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Mathematical Modeling	Course Code	25IMSMA904
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Be familiar the concept of mathematical modeling. CLO2: Derive solutions of various problems using different techniques to describe and explore real world data and phenomena. CLO3: Learn about application of mathematics in various fields.			
Section – I Mathematical modeling: need, techniques, classification and illustrations; Mathematical modeling through ordinary differential equations of first order. Linear growth and Decay models. Non-Linear and Decay models.			
Section – II Epidemic spreading and compartment Population Dynamics, Epidemics models; mathematical modeling through systems of ordinary differential equations; mathematical modeling in economic, medicine, arm-race, battle.			
Section – III Mathematical modeling through ordinary differential equations of second order Planetary motion, Circular motion and motion of Satellites. Higher order (linear) models. Mathematical modeling through difference equations: Need, basic theory; mathematical modeling in probability theory, economics, finance, population dynamics and genetics.			
Section – IV Mathematical modeling through partial differential equations: simple models, mass-balance equations, variational principles, probability generating function, traffic flow problems, initial & boundary conditions.			
References: 1. J.N. Kapur: Mathematical Modeling, Wiley Eastern Ltd., 1990 2. B. Albright;Mathematical Modeling with Excel, Jones & Bartlett,2010			

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Bio-Mechanics	Course Code	25SIMSMA905
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Be familiar the concept of Normal modes of vibration, Decoupling of equations of motion. CLO2: Learn about flow around an airfoil, Flow around bluff bodies. CLO3: Learn about Indicator dilution method, and peristalsis, Tracer motion in a model of pulmonary microcirculation.			
Section – I Newton equations of motion, Mathematical modeling, Continuum approach, Segmental movement and vibrations, Lagrange equations, Normal modes of vibration, Decoupling of equations of motion. Flow around an airfoil, Flow around bluff bodies, Steady state aeroelastic problems, Transient fluid dynamics forces due to unsteady motion, Flutter.			
Section – II Kutta-Joukowski theorem, Circulation and vorticity in the wake, Vortex system associated with a finite wing in nonsteady motion, Thin wing in steady flow. Blood flow in heart, lungs, arteries, and veins, Field equations and boundary conditions, Pulsatile flow in arteries, Progressive waves superposed on a steady flow, Reflection and transmission of waves at junctions.			
Section – III Velocity profile of a steady flow in a tube, Steady laminar flow in an elastic tube, Velocity profile of Pulsatile flow, The Reynolds number, Stokes number, and Womersley number, Systematic blood pressure, Flow in collapsible tubes. Micro-and macrocirculation Rheological properties of blood, Pulmonary capillary blood flow. Respiratory gas flow, Interaction between convection and diffusion, Dynamics of the ventilation system.			
Section – IV Laws of thermodynamics, Gibbs and Gibbs – Duhem equations, Chemical potential, Entropy in a system with heat and mass transfer, Diffusion, Filtration, and fluid movement in interstitial space in thermodynamic view, Diffusion from molecular point of view. Mass transport in capillaries, Tissues, Interstitial space, Lymphatics, Indicator dilution method, and peristalsis, Tracer motion in a model of pulmonary microcirculation.			
References: 1. Y.C. Fung, Biomechanics: Motion, Flow, Stress and Growth, Springer-Verlag, New York Inc., 1990.			

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Financial Mathematics	Course Code	25IMSMA906
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Be familiar the fundamental of financial mathematics CLO2: Learn about black- schools analysis, American exotic option etc. CLO3: Learn about the applications of mathematical concepts in economical and financial problems.			
Section – I Fundamentals of Financial Mathematics, Asset Price Model.			
Section – II Black-Scholes Analysis, Variations on Black-Scholes models.			
Section – III Numerical Methods, American Option, Exotic Options.			
Section – IV Path-Dependent Options, Bonds and Interest Rate Derivatives, Stochastic calculus.

Date of PG BOS & R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Finite Element Analysis	Course Code:	25IMSMA907
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	Credits:4 3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing seven short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Understand the general theory of Finite Element method and its difference with finite difference method CLO2: Use the role and significance of shape functions in finite element formulations and use of linear, quadratic, and cubic shape functions for interpolation CLO3: Formulate some important 1, 2 and 3 dimensional elements. CLO4: Apply the weighted residual and variational approaches in solving some boundary value problems			
Section – I			15 hrs
General theory of finite element methods, difference between finite element and finite difference methods, review of some integral formulae, concept of discretization, different coordinates, one dimensional finite elements, concept of shape functions, stiffness matrix, connectivity, boundary conditions, and equilibrium equation.			
Section – II			15 hrs
Numerical integration, construction of shape functions: linear elements (one dimensional bar element, two dimensional-triangular and rectangular elements, three dimensional tetrahedron element).			
Section - III			15 hrs
Higher order elements: one dimensional quadratic element, two dimensional triangular element, rectangular element, three dimensional tetrahedron element: quadratic element and higher order elements			
Section – IV			15 hrs
Weighted residual and variational approaches (Galerkin method, collocation method, Rayleigh Ritz method etc.), solving one-dimensional problems. Application of finite element methods for solving various boundary value problems, computer procedures for finite element analysis.

Date of PGBOS&R: July 22, 2025

Semester – IX (for Option-I and Option-II)

Name of the Course	Graph Theory with Applications	Course Code	25IMSMA 908
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Identify and describe types of graphs and basic graph properties. CLO2: Solve problems using concepts of connectivity, Euler and Hamiltonian paths. CLO3: Apply spanning tree algorithms to real-life networks. CLO4: Use coloring and planarity in graph-based applications like scheduling and layout designs.			
Section I Definition and representation of graphs, Types of graphs: simple, multigraph, pseudograph, complete, regular, bipartite, Degree of vertices, Handshaking Lemma, Subgraphs, complement, isomorphism of graphs.			
Section-II Walks, trails, paths, and circuits, Connected components, Eulerian and Hamiltonian graphs, Euler's theorem (with proof and examples), Hamiltonian paths and cycles (Dirac's and Ore's theorems – statements only), Applications: route planning, social network graphs.			
Section-III Definition and types of trees: rooted, binary, m-ary, Properties of trees, tree traversal algorithms (preorder, inorder, postorder), Spanning trees and their applications, Kruskal's and Prim's Algorithms (step-by-step process, with examples).			
Section-IV Vertex coloring, chromatic number, applications in timetabling and scheduling, Independent sets and cliques, Planar graphs: definitions, Euler's formula, regions, and faces. Kuratowski's theorem (statement only), dual graphs.

Date of PGBOS&R: July 22, 2025

Semester –IX (for Option-I and Option-II)

Name of the Course	Fuzzy Set Theory	Course Code	25IMSMA909
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Draw a parallelism between crisp set operations and fuzzy set operations through the use of characteristic and membership functions respectively. CLO 2: Learn fuzzy sets using linguistic words and represent these sets by membership functions. CLO 3: Define mapping of fuzzy sets by a function and fuzzy-set-related notions; such as α-level sets, convexity, normality, support, etc. CLO 4: Know the concepts of fuzzy graph, fuzzy relation, fuzzy morphism and fuzzy numbers. CLO 5: Become familiar with the extension principle, its compatibility with the α-level sets and its usefulness in performing fuzzy number arithmetic operations			
Section-I Definition of Fuzzy Set, Expanding Concepts of Fuzzy Set, Standard Operations of Fuzzy Set, Fuzzy Complement, Fuzzy Union, Fuzzy Intersection, Other Operations in Fuzzy Set, T- norms and T- conorms.			
Section-II Product Set, Definition of Relation, Characteristics of Relation, Representation Methods of Relations, Operations on Relations, Path and Connectivity in Graph, Fundamental Properties, Equivalence Relation, Compatibility Relation, Pre-order Relation, Order Relation, Definition and Examples of Fuzzy Relation, Fuzzy Matrix, Operations on Fuzzy Relation, Composition of Fuzzy Relation, α - cut of Fuzzy Relation, Projection and Cylindrical Extension, Extension by Relation, Extension Principle, Extension by Fuzzy Relation, Fuzzy distance between Fuzzy Sets.			
Section-III Graph and Fuzzy Graph, Fuzzy Graph and Fuzzy Relation, α - cut of Fuzzy Graph, Fuzzy Network, Reflexive Relation, Symmetric Relation, Transitive Relation, Transitive Closure, Fuzzy Equivalence Relation, Fuzzy Compatibility Relation, Fuzzy Pre-order Relation, Fuzzy Order Relation, Fuzzy Ordinal Relation, Dissimilitude Relation, Fuzzy Morphism, Examples of Fuzzy Morphism.			
Section-IV Interval, Fuzzy Number, Operation of Interval, Operation of α - cut Interval, Examples of Fuzzy Number Operation, Definition of Triangular Fuzzy Number, Operation of Triangular Fuzzy Number, Operation of General Fuzzy Numbers, Approximation of Triangular Fuzzy Number, Operations of Trapezoidal Fuzzy Number, Bell Shape Fuzzy Number.

Zimmerman, Fuzzy Set Theory and its Applications, Allied Publishers Ltd., New Delhi, 1991. 3. John Yen, Reza Langari, Fuzzy Logic-Intelligence, Control and Information, Pearson Education, 1999.			

Date of PG BOS & R: July 22, 2025

Semester –IX (for Option-III)

Name of the Course	Research Thesis	Course Code	25IMSMA9RT
Maximum Marks	Theory: 150(Internal)+350(External)=500	Time of Examinations	1 Hour

GUIDELINES:

Every student will have to do research work based on the topic assigned by the supervisor. At the end of the semester student will submit a “Report” based on his/her research work. Evaluation will be on the basis of pre assigned seminar and monthly progress reports (the format will be provided by the department) to their respective research guide. External evaluation will be carried by external examiner on the basis of presentation, viva-voce, and research report.

Topics for the research report: Teacher may assign research topics to the students in following areas:

- Lab-oriented
- Computer and software-oriented
- Survey-oriented
- Study-oriented
- Combination of any of the above mentioned areas

Criteria for Evaluation:

a. Attendance (Minimum attendance required 75%)

Total Attendance (%)	Marks Awarded (Max marks 20)
>75-80	14
>80-85	16
>85-90	18
>90	20

b. Internal Evaluation- 130 Marks

- Pre study seminar - 60 Marks
- Progress reports - 70 Marks

c. External evaluation- 350 Marks

- Final seminar - 100 Marks
- Viva-voce - 100 Marks
- Research report - 150 Mark

Date of PGBOS&R: July 22, 2025

Semester –X (for Option-I)

Name of the Course	Functional Analysis	Course Code	25IMSMA1001
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Verify the requirements of a norm, completeness with respect to a norm, relation between compactness and dimension of a space, check boundedness of a linear operator and relate to continuity, convergence of operators by using a suitable norm, compute the dual spaces. CLO 2: Distinguish between Banach spaces and Hilbert spaces, decompose a Hilbert space in terms of orthogonal complements. CLO 3: Check totality of orthonormal sets and sequences, represent a bounded linear functional in terms of inner product, classify operators into self-adjoint, unitary and normal operators CLO 4: Extend a linear functional under suitable conditions, compute adjoint of operators, check reflexivity of a space, ability to apply uniform boundedness theorem, open mapping theorem and closed graph theorem, check the convergence of operators and functional and weak and strong convergence of sequences.			
Section-I Metric Space, sequences, Cauchy sequences, complete metric spaces and examples, Baire's theorem. Cantor intersection theorem and Banach fixed point principle, normed linear spaces. Banach spaces, examples of Banach spaces and subspaces.			
Section-II Continuity of linear maps, Equivalent norms, normed spaces of bounded Linear maps, bounded linear functionals, dual spaces of l^p, $\mathbb{R}^n$ and reflexivity, Hilbert spaces and examples, orthogonality, orthonormal sets, Bessel's inequality, Parseval's theorem, the conjugate space of a Hilbert space.			
Section-III Representation of bounded functional on Hilbert space, adjoint operators, self-adjoint operators, normal and unitary operators. weak and strong convergence, completely continuous operators.			
Section-IV Hahn-Banach theorem and its applications, uniform boundedness principle, open mapping theorem, projections on Banach spaces, closed graph theorem. Adjoint operators, Reflexivity.

Conway, A course in Functional Analysis, Springer-Verlag, Berlin, 1985.			

Date of PG BOS & R: July 22, 2025

Name of the Course	Mechanics of Solids-II	Course Code	251MSMA1002
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Be familiar with the concept of generalized plane stress and solution of two-dimensional biharmonic equations. CLO 2: Solve the problems based on thick-walled tube under external and internal pressures. CLO 3: Understand the concept of torsional rigidity, lines of shearing stress and solve the problems of torsion of beams with different cross-sections. CLO 4: Describe Ritz method, Galerkin method, Kantorovich method and their applications to the torsional problems.			
Section-I Two-dimensional Problems: Plane strain and Plane stress. Generalized plane stress. Airy stress function for plane strain problems. General solutions of a Biharmonic equation. Stresses and displacements in terms of complex potentials. Thickwalled tube under external and internal pressures. Rotating shaft.			
Section-II Torsion of Beams: Torsion of cylindrical bars. Torsional rigidity. Torsion and stress functions. Lines of shearing stress. Simple problems related to circle, ellipse and equilateral triangle cross-section.			
Section-III Variational Methods: Reciprocal theorem of Betti and Rayleigh. Deflection of elastic string by Transverse load; Deflection of central line of Beam, Deflection of elastic membrane. The Ritz method-one & two dimensional, The Galerkin method, The method of Kantorovich.			
Section-IV Viscoelasticity: Spring & Dashpot, Maxwell & Kelvin Models, Three parameter solid, Correspondence principle & its application to the Deformation of a viscoelastic Thick-walled tube in Plane strain.

Date of PG BOS & R: July 22, 2025

Semester –X (for Option-I)

Name of the Course	Advanced Fluid Dynamics	Course Code	25IMSMA1003
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CO1 Understand about vortex motion and its permanence, rectilinear vortices, vortex images and specific types of rows of vortices. CO2 Acquire knowledge of viscosity, relation between shear stress and rates of shear strain for Newtonian fluids, energy dissipation due to viscosity, and laminar and turbulent flows. CO3 Derive the equations of motion for a viscous fluid flow and solve them for flow of Newtonian fluids in pipes and ducts for laminar flow fields, and their applications in mechanical engineering. CO4 Get familiar with dimensional analysis and similitude, and understand the common dimensional numbers of fluid dynamics along with their physical and mathematical significance. CO5 Derive and solve the boundary layer equation in two-dimensions and explain the significance of characteristic boundary layer parameters for simple physical problems.			
Section – I Vortex motion. Kelvin's proof of permanence. Motions due to circular and rectilinear vortices. Spiral vortex. Vortex doublet. Image of a vortex. Centroid of vortices. Single and double infinite rows of vortices. Karman vortex street. Applications of conformal mapping to fluid dynamics.			
Section – II Stress components in a real fluid. Relation between Cartesian components of stress. Translational motion of fluid element. Rates of strain. Transformation of rates of strains. Relation between stresses and rates of strain. The co-efficient of viscosity and laminar flow. Navier-Stoke's equations of motion. Equations of motion in cylindrical and spherical polar co-ordinates. Equation of energy. Diffusion of vorticity. Energy dissipation due to viscosity. Equation of state.			
Section – III Plane Poiseuille and Couette flows between two parallel plates. Theory of lubrication. Hagen Poiseuille flow. Steady flow between co-axial circular cylinders and concentric rotating cylinders. Flow through tubes of uniform elliptic and equilateral triangular cross-section. Flow in convergent and divergent chennals. Unsteady flow over a flat plate. Steady flow past a fixed sphere.			
Section – IV Dynamical similarity. Inspection analysis. Non-dimensional numbers. Dimensional analysis. Buckingham π -theorem and its application. Physical importance of non-dimensional parameters. Prandtl's boundary layer. Boundary layer equation in two-dimensions. The boundary layer on a flat plate (Blasius solution). Characteristic boundary layer parameters. Karman integral conditions. Karman-Pohlhausen method.

Date of PG BOS & R: July 22, 2025

Semester –X (for Option-I)

Name of the Course	Methods of Applied Mathematics	Course Code	25IMSMA1004
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1 Solve boundary value problems related to Laplace, heat and wave equations by method of separation of variables. CLO2 Find the solution of the wave, diffusion and Laplace equations using Fourier series. CLO3 Use Parallel Axes Theorem to obtain moment of inertia. CLO4 Apply Hankel transformation to solve BVP and IVP.			
Section - I Solution of 3D Laplace, wave and heat equations in spherical polar co-ordinates and cylindrical polar co-ordinates by the method of separation of variables. Fourier series solution of the wave equation, transformation of boundary value problems.			
Section - II Fourier series solution of the heat equation, steady-state temperature in plates, The heat and wave equations in unbounded domains, Fourier transform solution of boundary value problems. The heat equation in an infinite cylinder and in a solid sphere.			
Section - III Hankel transform of elementary functions. Operational properties of the Hankel transform. Applications of Hankel transforms to PDE. Definition and basic properties of finite Fourier sine and cosine transforms, its applications to the solutions of BVP's and IVP's.			
Section - IV Moments and products of inertia, Angular momentum of a rigid body, principal axes and principal moment of inertia of a rigid body, kinetic energy of a rigid body rotating about a fixed point, Momental ellipsoid and equimomental systems, coplanar mass distributions, general motion of a rigid body.

O'Neil, Advanced Engineering Mathematics, 4th Edition, An International Thomson Publishing Company. 4. I.N. Sneddon, Elements of Partial Differential Equations, Prentice Hall, McGraw Hill. 5. I.N. Sneddon, Special Functions of Mathematical Physics and Chemistry. 6. F. Chorlton, Dynamics, CBS publishers and Distributors.			

Date of PG BOS & R: July 22, 2025

Semester –X (for Option-I)

Name of the Course	Algebraic Number Theory	Course Code	25IMSMA1005
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Learn the arithmetic of algebraic number fields CLO 2: Prove theorems for integral bases and unique factorization into ideals. CLO 3: Factorize an algebraic integer into irreducibles. CLO 4: Obtain the ideals of an algebraic number ring. CLO 5: Understand ramified and unramified extensions and their related results.			
Section-I Algebraic Number and Integers : Gaussian integers and its properties, Primes and fundamental theorem in the ring of Gaussian integers, Integers and fundamental theorem in $\mathbb{Q}(\omega)$ where $\omega^3 = 1$, Algebraic fields, Primitive polynomials, The general quadratic field $\mathbb{Q}(\sqrt{m})$, Sections of $\mathbb{Q}(\sqrt{2})$, Fields in which fundamental theorem is false, Real and complex Euclidean fields, Fermat theorem in the ring of Gaussian integers, Primes of $\mathbb{Q}(\sqrt{2})$ and $\mathbb{Q}(\sqrt{5})$.			
Section-II Countability of set of algebraic numbers, Liouville theorem and generalizations, Transcendental numbers, Algebraic number fields, Liouville theorem of primitive elements, Ring of algebraic integers, Theorem of primitive elements.			
Section-III Norm and trace of an algebraic number, Non degeneracy of bilinear pairing, Existence of an integral basis, Discriminant of an algebraic number field, Ideals in the ring of algebraic integers, Explicit construction of integral basis, Sign of the discriminant, Cyclotomic fields, Calculation for quadratic and cubic cases.			
Section-IV Integral closure, Noetherian ring, Characterizing Dedekind domains, Fractional ideals and unique factorization, G.C.D. and L.C.M. of ideals, Chinese remainder theorem, Dedekind theorem, Ramified and unramified extensions, Different of an algebraic number field, Factorization in the ring of algebraic integers.

Date of PG BOS & R: July 22, 2025

Semester -X (for Option-I)

Name of the Course	Theory of Field Extensions	Course Code	25IMSMA1006
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	03 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO 1: Use diverse properties of field extensions in various areas. CLO 2: Establish the connection between the concept of field extensions and Galois theory. CLO 3: Describe the concept of automorphism, monomorphism and their linear independence in field theory CLO 4: Compute the Galois group for several classical situations. CLO 5: Solve polynomial equations by radicals along with the understanding of ruler and compass constructions.			
Section-I Extension of fields: Elementary properties, Simple Extensions, Algebraic and transcendental Extensions. Factorization of polynomials.			
Section-II Splitting fields, Algebraically closed fields, Separable extensions, Galois fields, Perfect fields.			
Section-III Galois theory: Automorphism of fields, Monomorphisms and their linear independence, Fixed fields.			
Section-IV Normal extensions. Normal closure of an extension, The fundamental theorem of Galois theory.

Date of PG BOS & R: July 22, 2025

Semester.-X (for Option-I)

Name of the Course	Mathematical Aspects of Seismology	Course Code	25IMSMA1007
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CO1 Understand about concepts of seismology and mathematics behind the approaches that are presented. CO2 Acquire knowledge about the structure of earth waves. CO3 Derive the equations for Spherical waves.			
Section – I Waves: General form of progressive waves, Harmonic waves, Plane waves, the wave equation. Principle of superposition. Progressive types solutions of wave equation. Stationary type solutions of wave equation in Cartesian, Cylindrical and Spherical coordinates systems. Equation of telegraphy. Exponential form of harmonic waves. D' Alembert's formula. Inhomogeneous wave equation.			
Section – II Introduction to Seismology: Earthquakes, Location of earthquakes, Causes of Earthquakes, Observation of Earthquakes, Aftershocks and Foreshocks, Earthquake magnitude, Seismic moment, Energy released by earthquakes, Interior structure of the Earth. Reduction of equation of motion to wave equations. P and S waves and their characteristics. Polarization of plane P and S waves.			
Section – III Surface waves: Rayleigh waves and Love waves. Snell's law of reflection and refraction. Reflection of plane P and SV waves at a free surface. Partition of reflected energy. Reflection at critical angles. Reflection and refraction of plane P and SH waves at Solid-Solid Interface.			
Section – IV Two dimensional Lamb's problems in an isotropic elastic solid: Area sources and Line Sources in an unlimited elastic solid. A normal force acts on the surface of a semi-infinite elastic solid, tangential forces acting on the surface of a semi-infinite elastic solid. Three dimensional Lamb's problems in an isotropic elastic solid: Area or Volume sources and Point sources in an unlimited elastic solid, Area or Volume source and Point source on the surface of semi-infinite elastic solid.			
Books Recommended: 1. C.A. Coulson and A. Jefferey, Waves, Longman, New York, 1977. 2. M. Bath, Mathematical Aspects of Seismology, Elsevier Publishing Company, 1968. 3. W.M. Ewing, W.S. Singh; Seismic Waves and Sources, Springer-Verlag, 1981.			

Date of PG BOS & R: July 22, 2025

Semester –X (for Option-I)

Name of the Course	Coding Theory	Course Code	2SIMSMA1008
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Understand and apply discrete numeric functions, generating functions, and solve recurrence relations using both algebraic and generating function methods. CLO2: Analyze algebraic structures such as groups, rings, and lattices, and demonstrate understanding of their fundamental properties. CLO3: Apply Boolean algebra to simplify logic expressions and design efficient digital circuits using Karnaugh maps and switching theory. CLO4: Develop problem-solving skills in number theory, including divisibility, modular arithmetic, and congruences. CLO5: Use mathematical reasoning to connect abstract concepts from discrete mathematics to real-world applications in computing and engineering.			
Section – I The communication channel, the coding problem, Types of codes, Block codes, Error-detecting and error-correcting codes, Linear codes, The Ham-Ming metric, Description of linear block codes by matrices, Dual codes.			
Section-II Standard array, Syndrome, Step-by-step decoding, Modular representation, Error-correction capabilities of linear codes.			
Section-III Bounds on minimum distance for block codes, Plotkin bound, Hamming sphere packing bound, Varshamov-Gilbert-Sacks bound. Bounds for burst-error detecting and correcting codes.			
Section-IV Important linear block codes, Hamming codes, Golay codes, Perfect codes, Quasi-perfect codes, Reed-Muller codes, Codes derived from Hadamard matrices, Product codes, Concatenated codes.			
Books Recommended: 1. Raymond Hill, A First Course in Coding Theory, Oxford University Press, 1990. 2. Man Young Rhee, Error Correcting Coding Theory, McGraw Hill Inc., 1989. 3. F.J. Macwilliams and N.J. A. Sloane, The Theory of Error Correcting Codes, North- Holland, 2006. 4. W.W. Peterson and E.J. Weldon, Jr., Error-Correcting Codes. M.I.T. Press, Cambridge, Massachusetts, 1972.			

Date of PG BOS & R: July 22, 2025

Semester -X (for Option-I)

Name of the Course	Fourier and Wavelet Analysis	Course Code	25IMSMA1009
Maximum Marks	Theory: 30(Internal)+70(External)=100	Time of Examinations	3 Hours
Note: Examiner will set nine questions and the candidates will be required to attempt five questions in all. Question number one will be compulsory containing four short answer type questions from all sections. Further, examiner will set two questions from each section and the candidates will be required to attempt one question from each Section. All questions will carry equal marks.			
Course Learning Outcomes (CLO): CLO1: Understand the concept of Fourier transform. CLO2: Learn applications of these transforms in practice, for example in sampling signals CLO3: Apply these transforms in the study of antennas, in geometrical optics, in computer tomography, in probability theory.			
Section I Fourier Transform: The finite Fourier transform, the circle group T, convolution on T, $(L^1(T), +, *)$ as a Banach algebra, convolutions to products, convolution on T, the exponential form of Lebesgue's theorem, Fourier transform : trigonometric approach, exponential form, Basics/examples. Fourier transform and residues, residue theorem for the upper and lower half planes, the Abel kernel, the Fourier map, convolution on R, inversion, exponential form, inversion, trigonometric form, criterion for convergence, continuous analogue of Dini's theorem, continuous analogue of Lipschitz's test, analogue of Jordan's theorem.			
Section-II (C.1) summability for integrals, the Fejer-Lebesgue inversion theorem, the continuous Fejer Kernel, the Fourier map is not onto, a dominated inversion theorem, criterion for integrability of f^* Approximate identity for $L^1(R)$, Fourier Sine and Cosine transforms, Parseval's identities, the L^2 theory, Parseval's identities for L^2, inversion theorem for L^2 functions, the Plancherel theorem, A sampling theorem, the Mellin transform, variations.			
Section-III Discrete Fourier transform, the DFT in matrix form, inversion theorem for the DFT, DFT map as a linear bijection, Parseval's identities, cyclic convolution, Fast Fourier transform for $N=2^k$, Buneman's Algorithm, FFT for $N=RC$, FFT factor form.			
Section-IV Wavelets : orthonormal basis from one function , Multiresolution Analysis, Mother wavelets yield Wavelet bases, Haar wavelets, from MRA to Mother wavelet, Mother wavelet theorem, construction of scaling function with compact support, Shannon wavelets, Riesz basis and MRAs, Franklin wavelets, frames, splines, the continuous wavelet transform.			
Books Recommended: 1. G. Bachman, L. Narici and E. Beckenstein : Fourier and Wavelet Analysis, Springer, 2000 2. Hernandez and G. Weiss : A first course on wavelets, CRC Press, New York, 1996 3. C. Shah: Introduction to Wavelets with 8. Applications, World Education Publishers, 2013.			

Date of PG BOS & R: July 22, 2025

Semester -X (for Option-II & III)

Name of the Course	Research Thesis	Course Code	25IMSMA10RT
Maximum Marks	Theory: 150(Internal)+350(External)=500	Time of Examinations	1 Hour

GUIDELINES:

Every student will have to do research work based on the topic assigned by the supervisor. At the end of the semester student will submit a "Report" based on his/her research work. Evaluation will be on the basis of pre assigned seminar and monthly progress reports (the format will be provided by the department) to their respective research guide. External evaluation will be carried by external examiner on the basis of presentation, viva-voce, and research report.

Topics for the research report: Teacher may assign research topics to the students in following areas:

- vi. Lab-oriented
- vii. Computer and software-oriented
- viii. Survey-oriented
- ix. Study-oriented
- x. Combination of any of the above mentioned areas

Criteria for Evaluation:

d. Attendance (Minimum attendance required 75%)

Total Attendance (%)	Marks Awarded (Max marks 20)
>75-80	14
>80-85	16
>85-90	18
>90	20

e. Internal Evaluation- 130 Marks

- iii) Pre study seminar - 60 Marks
- iv) Progress reports - 70 Marks

f. External evaluation- 350 Marks

- iv) Final seminar - 100 Marks
- v) Viva-voce - 100 Marks
- vi) Research report - 150 Mark

Date of PG BOS & R: July 22, 2025
